ESO.owl: <https://github.com/newsreader/eso>

FrameNet: <https://framenet.icsi.berkeley.edu/fndrupal/>

This is the ESO class hierarchy of Static events. The number between brackets after a class name point to the frequency of this class on mention level in the Car data set.

ESO MAPPING TABLES

These tables list the ESO classes that are currently in the Hackathon data (column B) and their mappings to Framenet Frames (column C). Column D represents the roles used in ESO and their mappings to Framenet Frame Elements (E).

The classes in this file are organized conceptually into dynamic event classes:
1) Translocations 2) Change of possession, 3) Intentional events and 4) Internal change.
Table 5 represents the static event classes and mappings

For all classes pertaining to Translocation and ChangeOfPossession holds that the mappings from ESO to FrameNet Frame Elements applies to all classes. For the other Dynamic and static event classes, the mappings from roles to frame elements are represented per class where applicable.

The owl version of the ontology can be accessed at: <https://github.com/newsreader/eso>

1)

ESO	FrameNet	ESO roles	Framenet Frame Element
Translocation			
Arriving	Arriving Vehicle_landing	translocation_source	Source
		translocation_goal	Goal
Distribution	Dispersal	translocation_theme	Deliverer Self_mover Agent Driver Carrier Traveler Vehicle Escapee Cotheme Individuals Component
Escaping	Escaping Fleeing		
Installing	Installing		
Leaving	Departing Quitting_a_place Setting_out Vehicle_departure		
Placing	Placing		
Removing	Removing		
Transportation	Delivery Bringing		
Translocation	Cause_motion Cotheme Intentional_traversing Operate_vehicle Ride_vehicle Self_motion Travel Traversing Use_vehicle		

2)

ESO	FrameNet	ESO roles	FrameNet Frame Element
-----	----------	-----------	------------------------

ChangeOfPossession

Buying	Commerce_buy —	possession-owner_1	Agent Donor Exporter Lender Seller Sender Source Supplier Victim
Getting	Getting Receiving	possession-owner_2	Borrower Buyer Goal Lessee Perpetrator Recipient
Giving	Giving Sending Supply	possession-theme	Possession Theme
Lending	Lending		
Paying	Commerce_pay		
Renting	Renting		
RentingOut	Renting_out		
Selling	Commerce_sell		
Stealing	Theft		
Taking	Taking		

3)

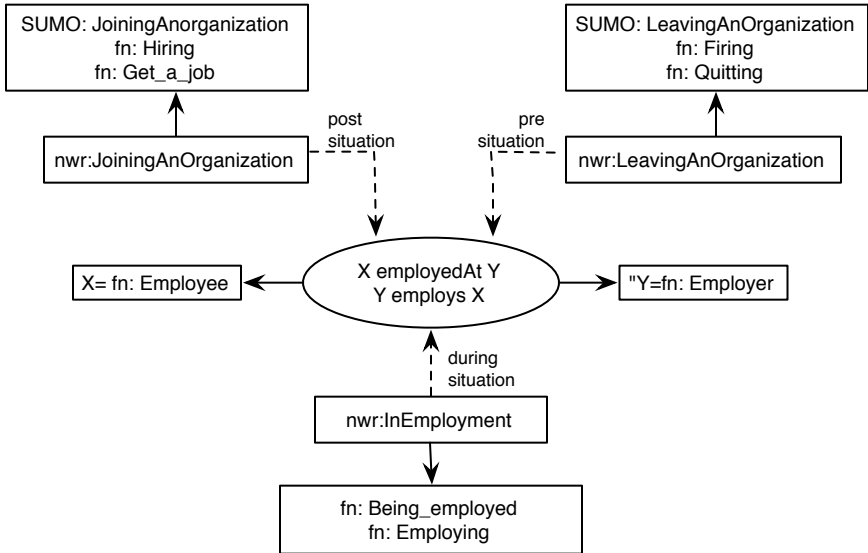

ESO	Framenet	ESO roles	FrameNet Frame Element
IntentionalEvent			
JoiningAnOrganization	Get_a_job Hiring	employment-employer employment-employee	Employer Employee
LeavingAnOrganization	Firing Quitting	employment-employer employment-employee	Employer Employee

4)

HavingInPossession	Possession	possession-theme possession-owner	Possession Theme Owner
InEmployment	Being_employed Employing	employment-employer employment-employee	Employer Employee

Structure of ESO classes and mappings to FrameNet on class and role level.

The ESO class `nwr:JoiningAnOrganization` is mapped to the FrameNet Frames `fn: Hiring` and `fn: Get_a_Job`.

For this class a pre and post situation is defined; the post situation is represented in this figure and states that some `X` is employed at `Y` after the event and that `Y` employs `X`. Both the `X` and `Y` are mapped to the FrameNet Frame Elements `fn:Employee` and `fn:Employer` respectively.
